

Activating Windows

You will need to connect to the VPN before you can activate your version of Windows.

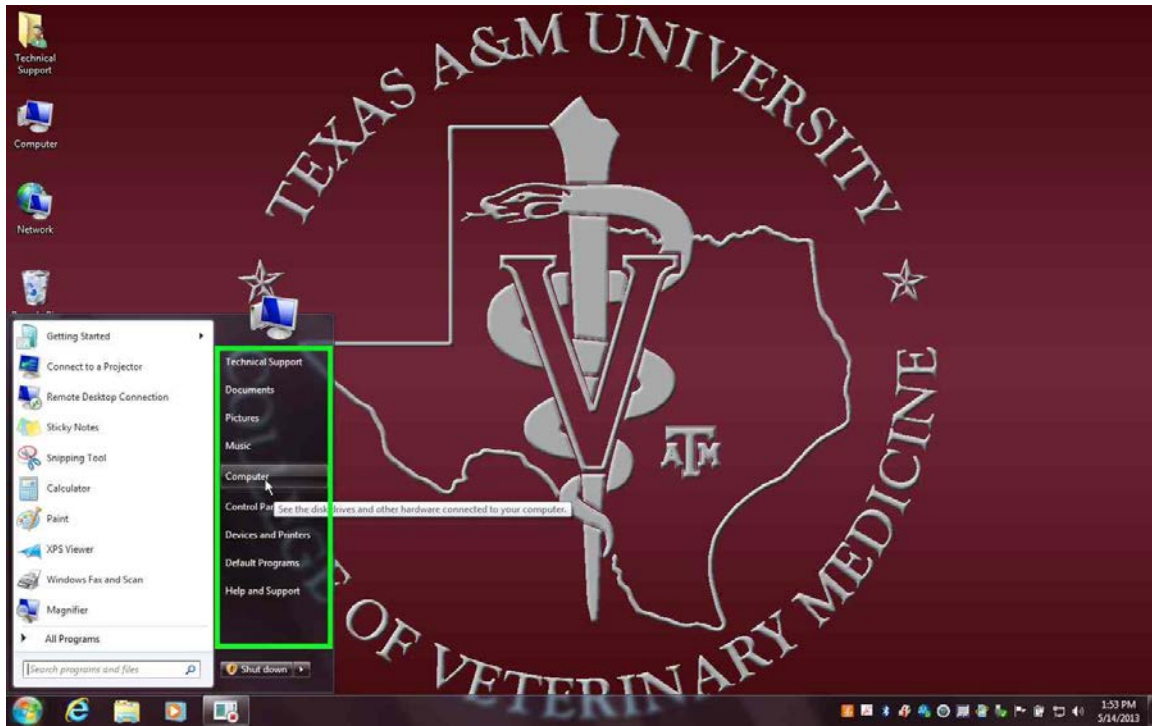

Please see the "VPN Via Webpage" help desk document before continuing on:

http://hdc.tamu.edu/Connecting/VPN/VPN_Via_Webpage/index.php

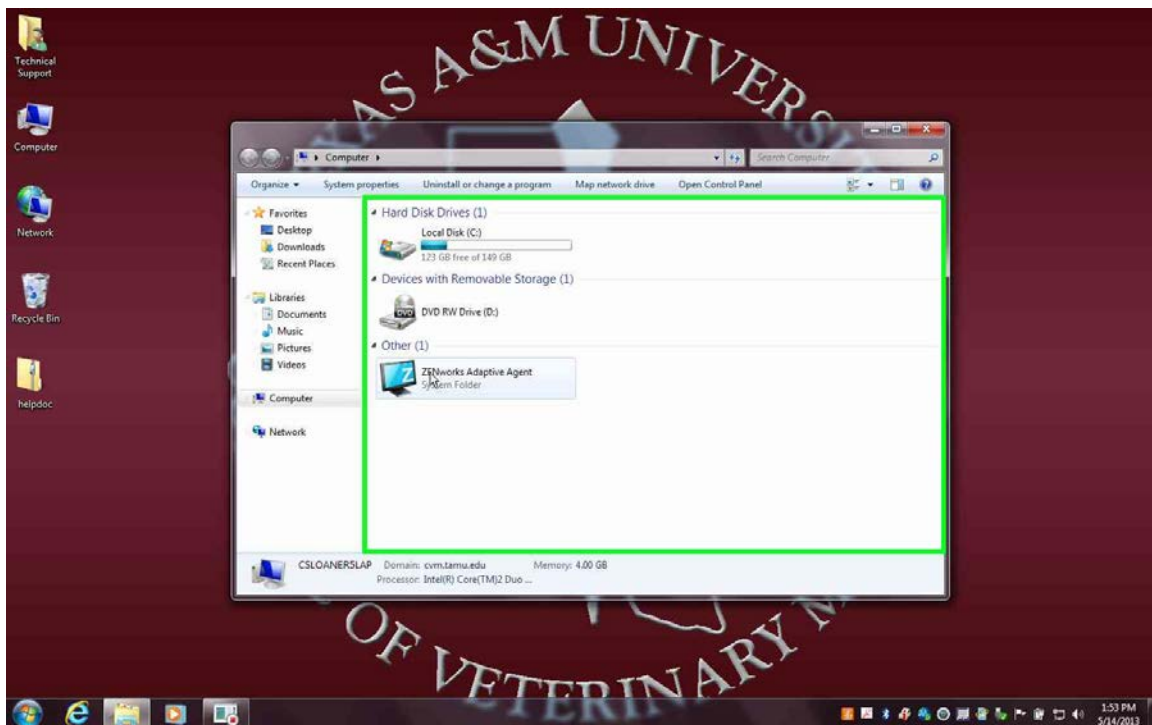

After you have connected to the VPN, click the "Start" button as shown here-

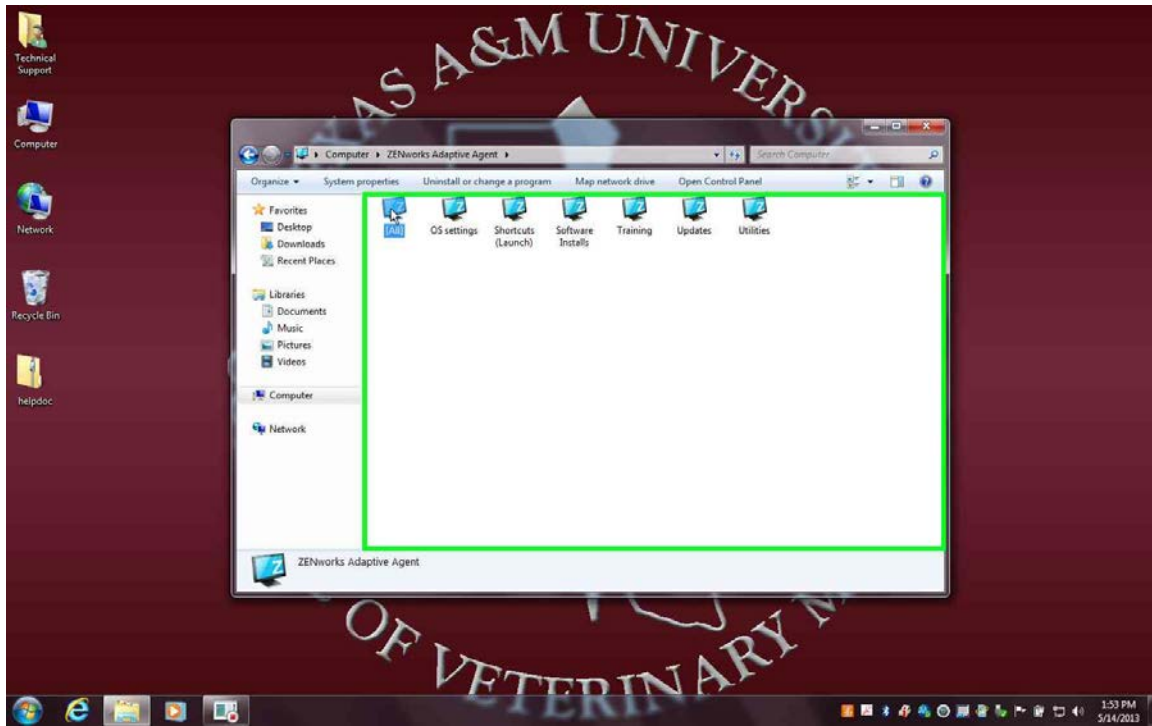

Next, click the "Computer" button

At the bottom of this window, you should see "ZENworks Adaptive Agent". Double click this to open it.

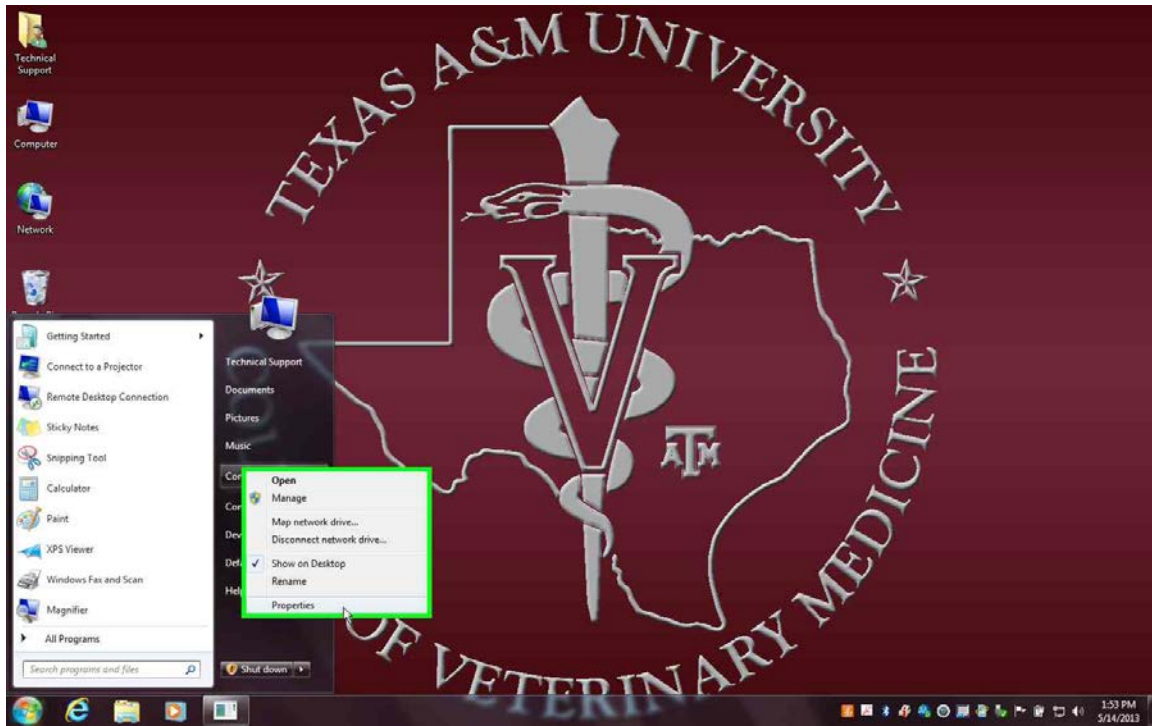

Next, double click the "[All]" icon.

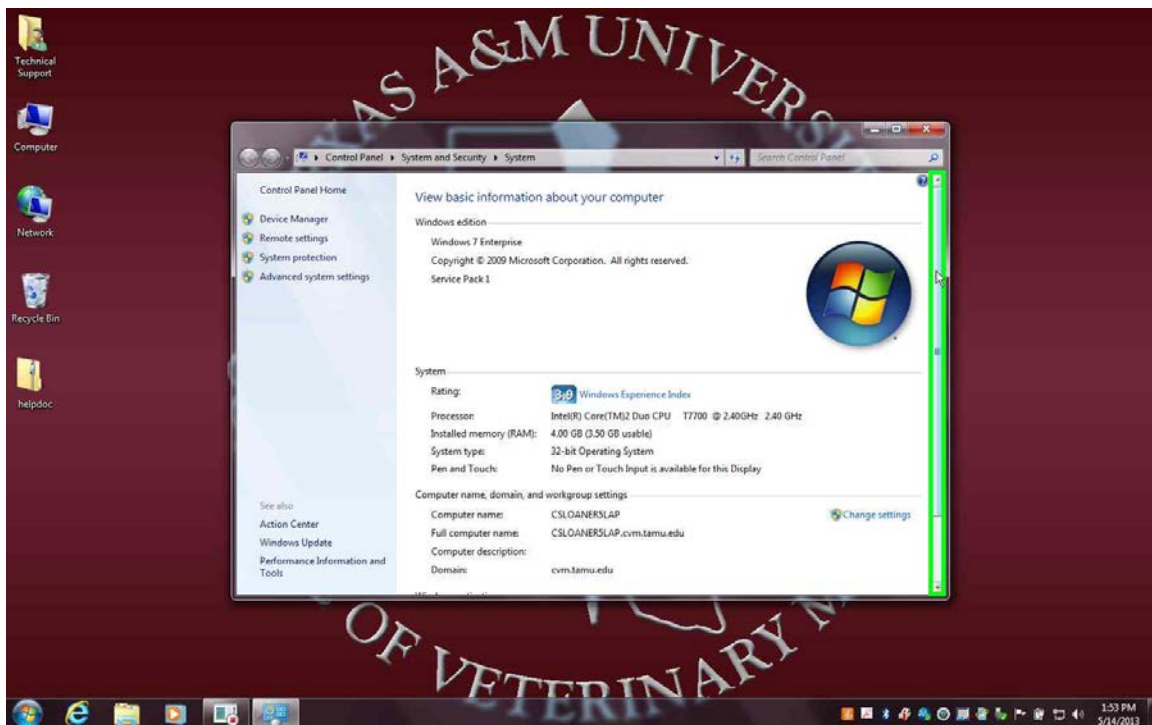

You should now see the "Activate Windows KMS" icon. Double click this to run Windows activation.

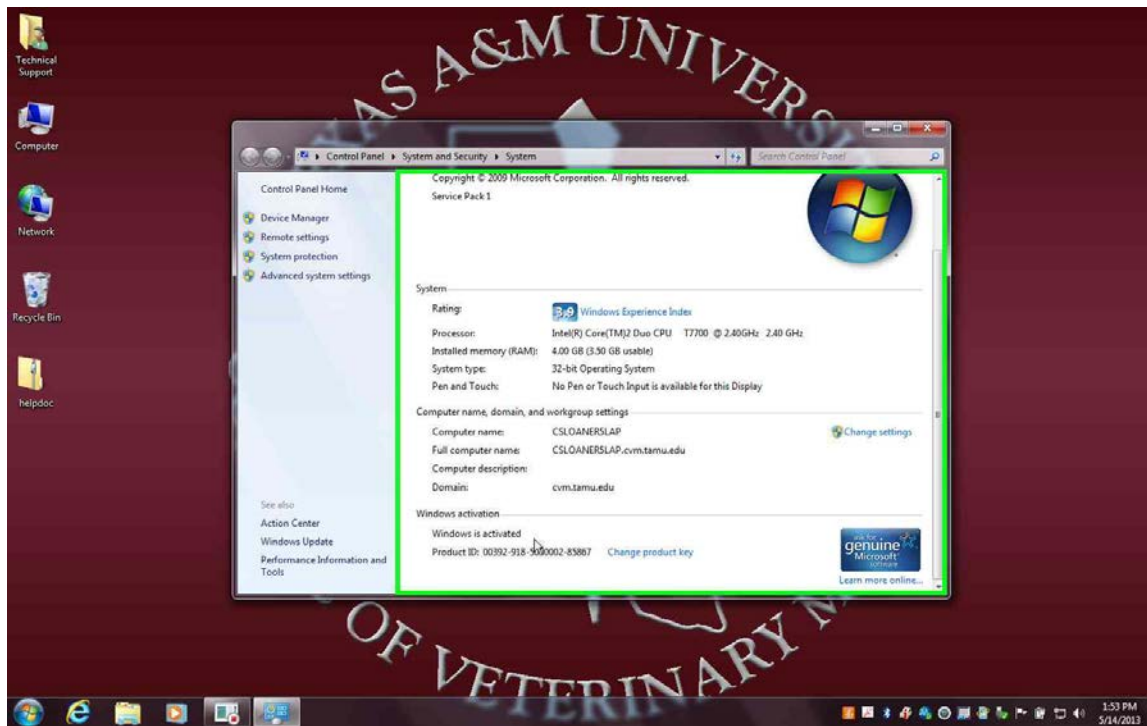

After letting the activation go through, right click "Computer" and click "Properties" from the list of options.

You will now see the screen below.

Check to make sure that Windows is activated near the bottom of the window.

The process is now complete.
