Position Description Clinical Track Assistant, Associate, or Full Professor of Radiology
Department of Large Animal Clinical Sciences
College of Veterinary Medicine and Biomedical Sciences
Texas A&M University

Clinical track faculty members are expected to demonstrate effectiveness and excellence in Academic Citizenship, Teaching and Patient Care (Scholarship of Applied Medical Sciences) and the Scholarship of Integration. The proportion of effort dedicated to each of these activities is negotiable and may change over time. However, it is anticipated that this position will involve approximately 60-65% (~30 weeks) per year of clinical duty (divided between the teleradiology service and Veterinary Medical Teaching Hospital). The remaining effort will be divided between teaching, academic service, and scholarship. Time devoted to clinical duty will initially emphasize establishing and managing a veterinary teleradiology service. As the service grows, it is anticipated that a transition will occur towards equal sharing of image interpretation duty amongst all radiology faculty with respect to the teleradiology service and Veterinary Medical Teaching Hospital. This is a new position that would be funded with income generated by the teleradiology service. The candidate must possess a DVM or equivalent degree, must be board certified by the American College of Veterinary Radiology or the European College of Veterinary Diagnostic Imaging, be eligible for Texas veterinary licensure, and have experience in Teleradiology leadership and management. Salary and rank are commensurate with qualification and experience.

Although the radiology faculty positions are in the Department of Large Animal Clinical Sciences, the radiologists provide medical imaging services for small, large and exotic animals. These services encompass: small animal ultrasonography, large and small animal radiology, MRI, computed tomography, and nuclear medicine. The following is a non-exhaustive list of responsibilities for the faculty member in this position. The selected individual will establish an electronic, web-based, veterinary teleradiology service for the College of Veterinary Medicine. This will include initial start-up of this service, image interpretation, scheduling of other participating radiologists (once needed), and day-to-day oversight, management and marketing of the teleradiology service. The job responsibilities and assignments will be reviewed annually by the department head and faculty member, and may be adjusted to meet the needs of the department and/or the faculty member.

Teaching: Both clinical and didactic teaching is required. The faculty member will:

- be effective and innovative in his/her approach to teaching.
- optimally utilize clinical case material as a means of instructing professional veterinary students assigned to the radiology rotations.
- participate in delivery of didactic lectures and laboratories related to radiology and imaging.
- develop well organized, creative lectures and laboratory materials for assigned courses in the professional curriculum.
- supervise and mentor interns and residents.
• participate in clinical rounds as appropriate.

**Scholarship:** The faculty member will:

• excel in Patient Care (Scholarship of Applied Medical Sciences) focused on radiology and imaging, provide imaging support which is critical for maintaining a caseload adequate for teaching, and advancing the science and practice of veterinary radiology and imaging. This includes providing and seeking consultation with other faculty members. It also includes providing outstanding communication and service to clinical colleagues in the Veterinary Medical Teaching Hospital.

• demonstrate effectiveness in the Scholarship of Integration through continuing education programs, review articles, and book chapters.

• participate as a collaborator with substantive contribution to the research of faculty members with independent research programs.

• participate in the Scholarship of Teaching when possible.

**Academic citizenship:** All faculty members are expected to be professionally collegial. In addition, Academic Service is expected in one or more of the following capacities:

• membership on departmental, college, and university committees as assigned.

• active participation in committees of professional associations as appropriate.

• execution of administrative duties as assigned by the department head.

• oversight of the professional development of technicians assigned to this clinical service.

• professional mentoring of interns residents and faculty members.
